PERIODICAL: Chemie a chemická technologie. Přehled technické a hospodářské literatury, Vol.18, No.2, 1961, page 98.
Abstract Ch 61-1341 (Izv. VUZ., Seriya Technol. tekst. prom., 1960, No.2, pp.97-100).

TEXT: The diffusion coefficients of two leuco-esters of vat dyestuffs in the dyeing of polyamide fibers of the Kapron type were determined. Rate of diffusion is increased by the addition of dispersing agents until a maximum is reached, after which the rate of diffusion falls off. The addition of surfactant OP-10 increases the rate of dyeing with vat colours of Kapron and wool fibers. 3 tables, 9 lit.references.

TITLE: Assembly for complex estimating the strength of flanged couplings. Class 42, No. 179984 /announced by Military Academy of Chemical Defense (Voyennaya akademiya khimicheskoy zashchity)/

SOURCE: Izobreteniya, promyshlennyye obraztzy, tovarnyye znaki, no. 6, 1966, 96

TOPIC TAGS: metal joining, mechanical power transmission device, pressure gage, visual signal, signal element

ABSTRACT: This Author Certificate presents an assembly for complex estimating of the strength of flanged couplings. The assembly contains a hydraulic press for loading the flanged coupling and instruments for determining the compression stress in the flanged joint (see Fig. 1). To determine more exactly the penetration of the working liquid between the contact surfaces of the flanged coupling, one half of the contact surface of the flanged coupling carries uniformly distributed electrical gauges. Each of these gauges is connected to a signaling device such as

"Improvement of Microclimatic Conditions in the Steppes for the Growth of Young Tree Plantings".

Meteorol. i Gidrologiya, No 6, pp 31-35, 1954.

Meteorological circumstances surrounding the growth of young forest plantings in the steppes can be improved by more complete utilization of winter precipitation (by creation of slots consisting of high-stem plants like corn and sunflower that increase snow cover in forest belts up to 82 cm as opposed to 32 cm without them), by sowing of high-stem plants in forest belts which create more temperature microclimate in the summer (by creation of shade for young trees so that they are subjected to only 14% of solar radiation), and also by mulching of the soil to conserve moisture and to lower the temperature in the daytime. (The best mulch is straw, which promotes growth of all kinds to 34-71 cm as against 17-46 cm without straw.) (RZhGeol, No 11, 1955)

TITLE: Free radical investigation in polyamides by E.P.R. method

SOURCE: AN SSSR. Doklady, v. 163, no. 5, 1965, 1113-1116

TOPIC TAGS: epr spectrum, polyamide, polymer, resin, polyamide acid

ABSTRACT: A. P. Rudakov, M. I. Bessonov, M. M. Koton, i dr. (DAN, 161, 3, 1965) have shown that heating of polyamide acids to 30-200C leads to a liberation of water and the formation of polyamide cyclic compounds. The authors of the present paper studied the nature of free radicals formed during the above reaction. The polyamides studied had the structure

Cord 1/2

L 64483-65

ACCESSION NR: AP5021279

On the basis of epr measurements, three types of radicals were detected. The kinetics of free radical accumulation was studied by gradual heating of specimen, and the results are shown graphically. It is concluded that during heating of polyamide acids two processes occur: a reversible one and an irreversible one. The reversible change is attributed to processes taking place in one and the same imide ring, whereas the nonreversible changes are attributed to the recombination of free radicals belonging to two different macromolecules. Radicals having the structure $-C=O$ were not detected. (Orig. art. has: 4 graphs. 3)

ANDROVIC A. Urenicka cerebropatia s myokloniami na podklade arteriolo-sklerozy Uraemic cerebropathy with myoclonia on an arterio-sclerotic basis Bratislavske lekars. List. 1950, 30/2 (165-170) Graphs I

Description of a case. The clinical picture was produced by the toxic causes. There was an increase permeability of the cerebral vessels and oedema of the brain tissue. Besides the ischaemia produced by the general intracranial hypertension, the angiospastic factor must be considered, especially because of the great variability of the clinical picture. The myoclonia was due to the disturbances of the efferent dentato-rubri tract and of the striatum. According to the authors these hyperkinesias are produced by the lesion of area 8-s and 2-s.

<i>CP</i> ANDROVICH, Ye. I. Reduced law of extinction of phosphorescence in crystals. (Androvich, Ye. I. <i>U.S.S.R. Phys. (U.S.S.R.)</i> 10, 10-15 (1948).) — A general expression for the law of extinction of the phosphorescence is derived in which only the fundamental parameter γ is the carrier factor. The other parameters det. only the U_{ext}, U_{int}, and integral light sum of the emission. The law is exactly applied to the state of complete saturation and a diagram for the construction of theoretical extinction curves is given. Also the functional relation with the original intensity and the degree of the activation is discussed. A last part concerns the papers of Illieckson and Parky (C.A. 41, 9125), Klavens and Wise (C.A. 41, 18406), and Herman and Meyer (C.A. 41, 20975) who came to similar results and conclusions but differed in important details from the opinion of A. On the explicit formulation of A's law (Dobryy Akad. Nauk. S.S.S.R., 83, 817 (1946); <i>Izvest. Akad. Nauk. S.S.S.R., Ser. Phys.</i> 10, 367 (1946)). W. Rhee
